DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted. The groups and the claims they include are as follows:

Group I, claim(s) 1-20, are drawn to a method of preparing a membrane having an affinity for biomolecules.

Group II, claim(s) 11-14, are drawn to the product made by the method of claims 1-4.

(a) An international or national stage application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept. Where a group of inventions is claimed in an application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those invention involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the **CLAIMED INVENTIONS, CONSIDERED AS A WHOLE, MAKES OVER THE PRIOR ART.**

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because the invention AS CLAIMED is known in the art, see Klein et al. (U.S. Patent # 5,766,908) who teach a method to construct a microporous membrane that is functionalized with an affinity ligand and dried (see Examples 5-8) and thus no special technical feature unites these inventions in a category.

In addition if Group I is elected, a further election of species must be made. This application contains claims containing the following patentably distinct species which are described below:

Art Unit: 1651

The applicant must elect one affinity ligand in claim(s) 3 and 4 selected from a thiophiles, hydrophobes, reversed phase ligands, dyes, low molecular weight charged or non-charged organic molecules, amino acids and analogs thereof, coenzymes, cofactors and analogs thereof, substrates and analogs thereof, endocrine and exocrine substances, enzyme substrates, enzyme inhibitors and analogs thereof, fatty acids, fatty acid derivatives, conjugated fatty acids and analogs thereof, nucleic acids, monomers and analogs and derivatives thereof, polymers and oligopolymers and analogs and derivatives thereof, high molecular weight carbohydrates, glycolic conjugates, proteins and oligomers, subunits and parts thereof, peptides, polypeptides and analogs and derivatives thereof, lectine, antibodies and parts thereof, hion proteins, haptenes, enzymes and subunits and parts thereof, structural proteins, receptors and parts thereof, xenobiotics, pharmaceuticals and pharmaceutically active substances, alkaloids, antibiotics, biomimicking substance and Protein A.

The species are independent or distinct because they do not belong to any art recognized group nor do they share a substantial structural feature. Art on one species does not render the others obvious.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
